Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. FCAS30DN60BB

Smart Power Module for SRM

Features

- 600V-30A 2-phase asymmetric bridge IGBT converter for SRM drive including control ICs for gate driving and protection
- Single-grounded power supply due to built-in HVIC
- Isolation rating of 1500Vrms/min.

Applications

- 2-phase SRM drives for home application vacuum cleaner.

General Description

FCAS30DN60BB is an advanced smart power module for SRM drive that Fairchild has newly developed and designed to provide very compact and high performance SRM motor drives mainly targeting low-power SRM application especially for a vacuum air cleaner. It combines optimized circuit protection and drive matched to low-loss IGBTs. System reliability is further enhanced by the integrated under-voltage lock-out and short-circuit protection. The high speed built-in HVIC provides optocoupler-less IGBT gate driving capability that further reduce the overall size of the system. In addition the incorporated HVIC facilitates the use of single-supply drive topology enabling the FCAS30DN60BB to be driven by only one drive supply voltage without negative bias.
